Trading Strategy Backtest Report

Strategy: IchimokuCloud_Default
Generated: 2025-09-30 20:52:39

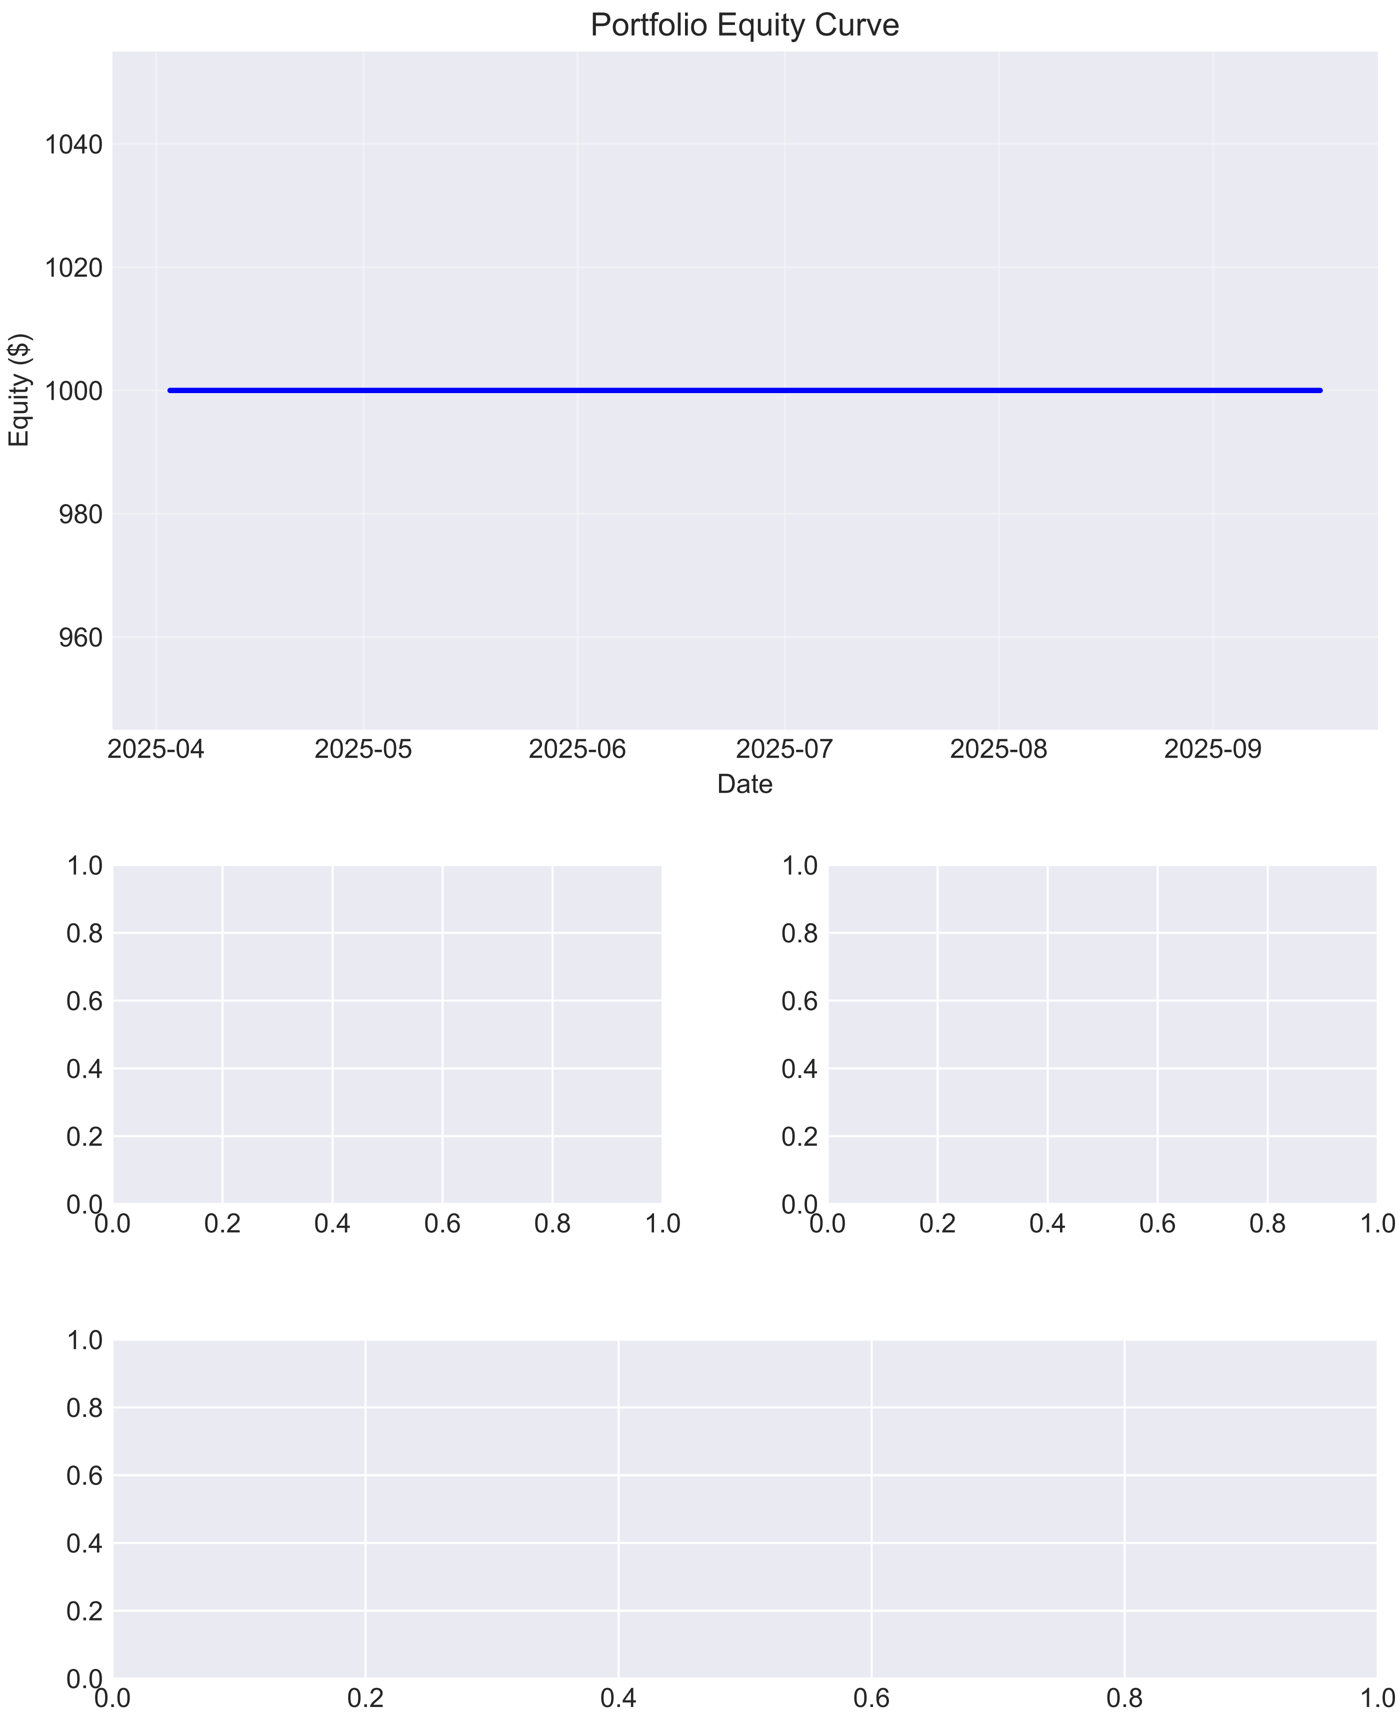
EXECUTIVE SUMMARY
==

Performance Overview:
• Total Return: 0.00%
• Sharpe Ratio: 0.00
• Maximum Drawdown: 0.00%
• Win Rate: 0.00%
• Profit Factor: 0.00
• Total Trades: 0

Performance Rating: Poor (1/5)
Risk Level: Low

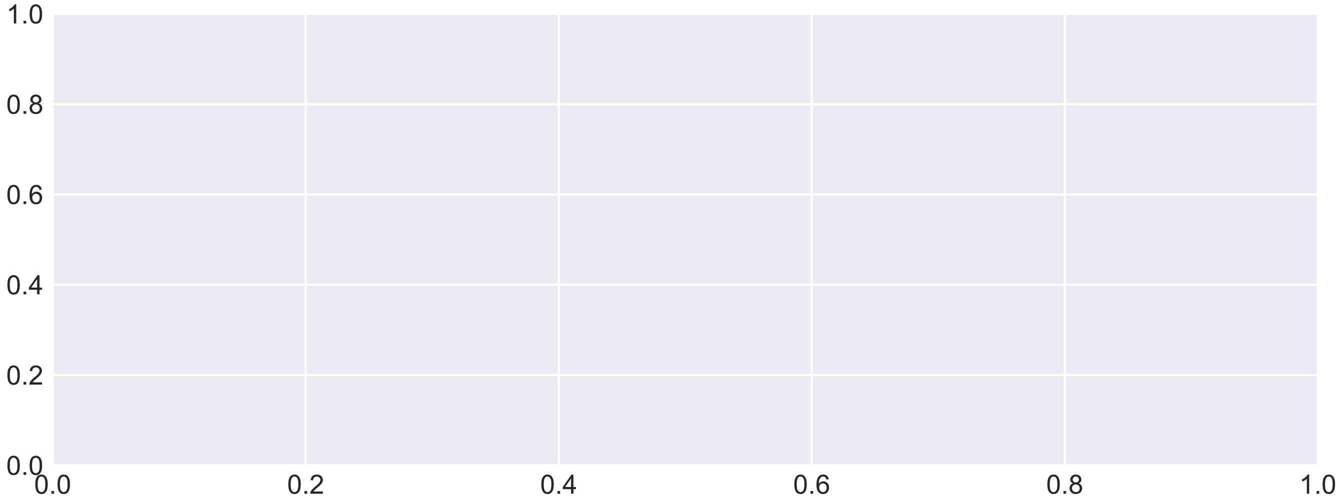
Key Insights:
1. Low Sharpe ratio indicates poor risk-adjusted performance
2. Low win rate of 0.0% indicates need for entry signal refinement
3. Profit factor near 1.0 suggests marginal profitability
4. Low drawdown indicates good capital preservation
5. Low trading frequency may limit profit potential

Performance Overview



Trading Analysis

Risk Analysis



Metric	Value
Maximum Drawdown	0.00%
Average Drawdown	0.00%
Drawdown Duration	0 days
Value at Risk (95%)	0.00%
Conditional VaR (95%)	0.00%
Downside Deviation	0.0000
Sortino Ratio	0.00
Calmar Ratio	0.00

Optimization Recommendations

```
OPTIMIZATION RECOMMENDATIONS
==================================================

Based on the backtest analysis, here are specific recommendations
for improving strategy performance:

1. PARAMETER OPTIMIZATION
   ----------------------------------------
   • Run walk-forward optimization to find more robust Ichimoku parameters
   • Current Tenkan period (9) may benefit from testing range 7-12
   • Consider shorter Ichimoku periods to increase trading frequency

2. SIGNAL IMPROVEMENTS
   ----------------------------------------
   • Add momentum confirmation (RSI > 50) to filter false breakouts
   • Implement volume confirmation for cloud breakout signals

3. RISK MANAGEMENT
   ----------------------------------------

4. NEXT STEPS
   ----------------------------------------
   • Run parameter optimization with suggested ranges
   • Validate improvements on out-of-sample data (last 3-6 months)
   • Implement Monte Carlo simulation for robustness testing
   • Consider market regime filters for adaptive parameter selection
```
